

MEDIA HOLOGRAM MANUAL

Dear partner,

Congratulations! Hereby you receive our official hologram display, powered by Leclerc Baby and Media Hologram. With this holographic content, we are taking the next step in our customer's journey and product points of sale. In this manual, you find all the steps to easily install the display.

1. Getting started

When the carton box is unpacked, please make sure to unwrap the sealing carefully. Do not use a knife. Afterwards, unfold the power cable and corresponding AC adapter by unrolling the power cable. You will find these under the hologram's base. You can now plug the AC adapter into the main power of your store. Please make sure to check the input and output label for proper utilisation. You can adjust the length of the power cable by simply putting the cable back into the base of the hologram display.

2. Using the hologram

After plugging in the AC adapter, please wait for the hologram to boot up. This can take up to 5 minutes. An auto-start default set-up makes sure the hologram will start spinning when plugged into the main power. **One touch, it doesn't get easier...**

3. Turning off the hologram

The hologram can be turned off very easily. Take the AC adapter out of the main power. The hologram will now stop rotating and automatically stop emitting lights.

Note: do not move the display when the hologram is still rotating.

4. Updating the hologram remotely

Updating the hologram or animation remotely can be done by creating a local hotspot on your computer or mobile device (smartphone). The device will then connect to the Internet using your own hotspot. Media Hologram can now update the animation. **Make sure the hotspot consists the following details:**

Name: Hologram
Password: 1q2w3e4r

This QR-code will bring you to a brief explanation video of setting up a hotspot on an Apple and/or Android device:

5. Warranty

The Media Hologram is provided with a standard supplier warranty of 2 years. It covers the repair or replacement of the broken hologram unit, if used normally and returned in the original export carton, which is provided with the correct batch production date.

6. In need of support?
